

Abdulaziz Nai

Senior Fullstack Engineer | [GitHub](#) | [My Website](#) | [Medium](#) | [LinkedIn](#)

Summary

Senior fullstack engineer with 5+ years of experience, focused on shipping high-value work fast. Frontend is where I'm sharpest: I've built multi-step wizards, dashboards, subscription systems, video streaming flows, and survey tools with real-time auto-save. I act as a team multiplier, supporting others through clear specs, collaboration, developing internal tooling, and mentoring. I own delivery end-to-end, from early planning through deployment and maintenance.

Experience

- **Senior Fullstack Developer & Team Lead - Anywai TR** (Nov 2023 - Present)

Developed and architected an online course platform, job post creation & recruiting platform, and candidate processing pipeline built on top of a sophisticated skills system.

- Acted as the main bridge between business and technical work, creating actionable tasks with acceptance criteria
- Led a team of 4 developers (onboarding, mentoring, hands-on workshops, biweekly 1:1s, performance reviews).
- Developed internal tools and automations, enabling same-day PR reviews across the team
- Built the platform core skill system, integrated with a job post platform with an ATS, bi-directional user-to-job-post matching and recommendations system based on skills, and an LLM-supported bulk processing pipeline for CVs
- Migrated the product from a legacy Bitbucket + AWS S3 + Angular + MongoDB + custom auth/self-hosting stack to Postgres + Supabase + Next.js + Vercel
- Reduced latency from an average of 1200ms to an average of 300ms via geo-colocating services and CDNs
- Migrated to Result-style error handling with clear error boundaries and centralized wide-event logging, reducing weekly crash reports for new features from 5-10 to 0-2, and reducing time-to-resolution for issues that do occur from hours to minutes
- Reduced per-developer i18n overhead from ~10 min/day to under 1 minute via shell scripts, Lingui, Crowdin, pre-push hooks, and CI/CD
- Optimized build process, reducing app build and deployment time from 12 to 2 minutes using turbopack and optimized configurations on Vercel
- Standardized AI tooling (Cursor, CodeRabbit) with detailed, regularly-updated codebase rules, enabling reliable AI-assisted scaffolding that cuts feature boilerplate from ~2 hours to ~20 minutes without quality regression

- **Lead Frontend Developer - Anywai TR** (Aug 2021 - Nov 2023)

Led frontend and design teams, working on UI and backend integrations for core platform features using Angular and later React. Maintained delivery velocity by staying closely aligned with the design team through a shared design system.

- Led onboarding and mentoring of a cross-functional team of 3 frontend developers and 2 designers
- Built and maintained a 30-component UI kit (Radix UI, shadcn) and a centralized Figma design system covering typography, spacing, and color, eliminating handoff inconsistency between design and engineering
- Ran workshops to get developers from different technical backgrounds onboard to use libraries like Tailwind and TanStack Query effectively

- **Data Analyst / Team Lead - Karatay Uni Data Science Team** (Aug 2020 - Aug 2021)
 - Led a small team of 5 students, researching requirements for a government grant and developing UI for an accompanying application

Skills

- **Frontend:** TypeScript, React, Next.js, TanStack Query/Start, Tailwind, Design Systems, SSR, i18n, Algolia
- **Backend:** Node.js, Express, oRPC, PostgreSQL, Supabase
- **DevOps:** CI/CD, Cloudflare, Linux, Railway, Vercel
- **Product:** Figma, Wireframing, UX, Information Architecture, E2E Testing, Analytics
- **AI Tooling:** Cursor, CodeRabbit, agent context management, authoring rules

Languages

- English (Fluent), Arabic (Native), Turkish (Fluent), German (A2)

Activities

- **Open source:**
 - [Finman: Personal finance management](#) for power users, providing advanced filters, sorting, and views à la Notion.
 - [Dart Import Sorter](#): VSCode extension with 12K+ downloads. Developed as tooling while working on a side project.
- **Medium Articles:** Wrote and published [20+ articles](#) about technical topics, various web-related concepts, components, and developer tooling

Education

- Bachelor's Degree in Computer Engineering - KTO Karatay University 2021
